

## Mister C's Seafood Policy

**Sustainability:** Meeting the needs of the present without compromising the ability of future Generations to meet their own needs. Sustainable development must address environmental, economic and social factors and the interrelationships between them

It is our intention to assist in ensuring the world's oceans are teeming with life, and seafood supplies are safeguarded for this generation and many more. As **fish lovers** it is our duty to **look after tomorrow's fish, today.**

Sustainable fish comes from an environmentally responsible fishery that does not contribute to the global environmental problem of over-fishing. To be properly worthy of the name a sustainable fishery must unequivocally be able to maintain fish stocks at a manageable level whilst maintaining a healthy ecosystem.

It is Mister C's policy to purchase only the finest quality fish from recognised and respected fish merchants. To contribute to the health of the world's oceans by striving to purchase only responsibly sourced and sustainable fish at all times

We only use suppliers who actively share the same principles as us, and will demand from these suppliers that the fish we are supplied is responsibly sourced and sustainable.

We will not use illegal, unreported or unregulated caught fish.

We will endeavour to ensure that all our fish is traceable back to the fishery, and the boat. To aid and assist wherever possible, organisations with their vital work in preserving the health of the world's oceans

Provide continual education and training for all staff on sustainability issues Relevant to Mister C's.

Review our sustainability performance and achievements; and ensure that all staff are involved in implementation of this policy and in reviewing sustainability performance.

Wherever possible, Mister C's will only purchase MSC certified fish to ensure the chain of custody is kept intact and all our fish is fully traceable.
